

The logo consists of a blue circle on the left, partially cut off by a vertical blue line. Inside the circle, there is a white wavy line representing water. To the right of the circle, the words "National Flood Forum" are written in a blue, sans-serif font, stacked vertically.

National Flood Forum

Blue Pages

Welcome to the National Flood Forum's 'Blue Pages'

This is a directory of flood protection products and services put together to advise and inform you of the range of products available to help you protect your home or business against flooding. Whilst the National Flood Forum cannot endorse any of these products we are happy to provide a platform to enable the public to make informed decisions.

One word of caution: where there is a risk of flooding to a depth of more than 0.9m, keeping water out can sometimes do more harm than good. The pressure of water against your property may cause structural damage to the building itself.

The National Flood Forum recommends that you visit:

<http://www.environment-agency.gov.uk/subjects/flood/826674/882909/483622/484713/>

before purchasing any flood protection products. If you don't have access to the internet, phone Floodline on 0845 988 1188 and ask for a copy of their information booklet 'flood products'.

Mary Dhonau

The National Flood Forum

Absorbeez

www.absorbeez.com

PO Box 139
Upminster
Essex
RM14 2YD

Tel 0500 51 00 52

The Absorbeez company manufactures rapidly deployed water absorbent bags of industrial quality. The bags are made in various sizes including ones to fit snugly between single or double doors or as sand bag alternatives.

They all absorb huge amounts of water for their size and can be built up as a barrier or placed to absorb water. No other bag range or product offers you the flexibility for deployment or value for money that Absorbeez does.

Action Dry Emergency Services Ltd

www.actiondry.co.uk

Fax 01708 507212

Action Dry are an established independent flood damage mitigation company providing industry leading systems and processes, surpassing industry guidelines as set out in the British Standard PAS 64.

Our 'green cleaning' techniques are backed up by a validation process on appropriate works such as river or sewage flooding and prove the highest standard of clean has been achieved without the use of chemicals.

Our drying out methodology includes the WaterOut rapid drying system which dries out flooded properties in a fraction of the time associated with conventional dehumidifiers. All works include an environmental and structural monitoring program which records the drying program from start to finish. The information is presented to the principal, with a certificate of drying.

AFS provide a complete service to protect your home or business from the effects of flooding, including air brick covers, door flood barriers and masonry sealing.

We carry out a survey of your property in order to identify the type, number and position of all the air bricks. We also inspect all doors, windows and waste outlets.

Airbrick covers are made from stainless steel and have a weatherproof rubber seal that will not perish. This moulds to the shape of the surrounding brickwork providing a water tight seal.

AFS protect your door accesses with a flood barrier from Flood Pro-Tech Systems. A totally innovative flood barrier that has been three years in development.

FLOODBAGS are for people who need an instant flood defence without the hassle of heavy sandbags.

Simply lay the super-lightweight floodbag on the ground, pour water on it from a hosepipe or douse it in a bucket and its hundreds of absorbent crystals absorb the water and the bag expands to become as effective as a traditional sandbag.

It becomes taut and puncture-proof within five minutes and is designed to mould into doorways.

Yet when stored, the floodbag folds neatly away, taking up a small space unlike sandbags that are unwieldy, difficult to carry and deteriorate over time.

Asset Protection Through 'First Response'

What is Aqua-Sac™?... Answer! "PEACE OF MIND"

Aqua-Sac™ S.O.S bags are what every home and business should have in times of emergency if the property is located in an area at risk of flooding.

Everyone knows that sandbags when placed correctly provide an effective barrier against flood water. They are always seen being used as the first line of defence in any flood related news coverage.

The Aqua-Sac™ S.O.S bag needs 'no sand' therefore, storing 25-50 bags will take up no more space than a couple of thick folded blankets.

Aqua-Sac™ S.O.S bags simply provide the weapon you need!

ACE offers a comprehensive range of products for Water Flow Control and Waterway Maintenance.

Products include low maintenance flapvalves, penstocks, tilting weirs, stoplogs, inline non-return valves, odour control valves, back-flow valves and flow regulating valves. The backflow valve is installed underground in the sewer system, to prevent backflow into the pipes leading from the house. The valve has been used extensively in Europe since 1988.

Services include assistance with specification, installation/commissioning and reliable on-site service back-up

ACE are suppliers to the Environment Agency, British Waterways, Internal Drainage Boards, the Utilities and a variety of Contractors.

Email info@bauerinnercity.co.uk

Bauer Inner City are providers of demountable and temporary demountable flood defence systems

DEMFLLOOD™ System

This rapidly-deployed flood defence barrier is manufactured from high-quality extruded aluminium and stainless steel. The system consists of demountable posts set at predetermined centres with beams slotted in between them to the design height.

K-System

This is a fully-mobile temporary flood defence concept. It is constructed from lightweight aluminium; rapidly deployed prior to a flood event; its 'flat-pack' design enables quick and easy removal from site and into storage. The K System was awarded the BSI Kitemark PAS- 1188-2 in April 2006.

Caro Flood Defence Systems Limited

Email info@carofds.co.uk

The Caro Group have developed an easily mountable and demountable flood barrier WaterWall.

The system consists of posts that can be quickly inserted and locked into pre-fixed ground inserts. Panels are then dropped into place and, when the complete system is secured, seals ensure that water up to a height of 100cm can be held back or diverted.

The same Patented principle (Patent No. 2371068) is used in the easily installed WaterDoor system, to prevent ingress in through personal doors.

Suppliers of Sorbarix water absorbent cushions for the prevention of flooding. The cushions will absorb up to 20 litres of water and act as a barrier to prevent flooding. Easy to store and lightweight (less than a pound in weight) it is much more practical than sandbags. Can be used in many different areas in the house.

They are used at many different venues including the Houses of Parliament, Historic Palaces, National trust and Wimbledon. Literature is available from the address opposite.

Damfast

Barton Mill,
Mill Lane,
Earls Barton
Northampton
NN6 0NR

Tel 01604 810507

DAMFAST is a successful, simple, low-cost flood prevention solution – tried, tested and proven in hundreds of locations by local authorities and private house-holders all over the UK for more than 10 years.

DAMFAST is a lightweight channel-and-panel device, easily and quickly fitted by any competent handyman

DAMFAST can be made-to-measure to fit any doorway or other opening at risk to flooding. Pre-formed, low-visibility channels are simply attached to both sides of the vulnerable area, and the panel can then be slotted in place in seconds whenever necessary.

WE HAVE SOLD THOUSANDS OF UNITS AND NEVER HAD ONE COMPLAINT OR FAILURE IN TEN YEARS! The standard DAMFAST kit costs £60 plus VAT.

**17 Newport Drive
Fishbourne
Chichester
West Sussex
PO19 3QQ**

Tel 01243 786 015

Email info@ecocoverage.co.uk

Eco-coverage technologies Ltd present the world's first 'Fit and Forget' Airbrick flood protection device. The innovative design acts essentially as a standard airbrick allowing unrestricted airflow underneath the property, yet under flood conditions uses the rising water to automatically shut off, inhibiting access through the airbricks and therefore flooding underneath the property. Unlike sand bags and covers no flood warning or pre flood intervention is required.

The BBA endorsed 'SMART' Airbrick requires no external power supply to operate and can be easily cleaned post flooding, providing protection 24/7 over and over again.

Flood Ark Ltd

www.floodark.co.uk

**Unit 4 Emmerson Industrial Estate
Norwich Road
Lenwade
Norwich
NR9 5SA**

Tel 01603 879977

Fax 01603 879964

Email info@floodark.co.uk

Flexible flood protection system, which although tested to a depth of 1100mm, can be made to suit individual requirements as each board is only 200mm in depth. The system is extremely lightweight and easy to employ giving instant protection. Boards can be added as and when required and are easily stored.

We offer a full range of barriers including windows, doors, patio doors, air brick covers and garages, which still allow vehicular access when the barriers are not in use.

Each installation is tailor made and therefore unique and configured to any additions or irregularities. Installations can thus be as unobtrusive as possible without awkward over sizing.

Floodgate – The Unique Flood Protection System

First launched over a decade ago, Floodgate is one of the leading suppliers of flood protection door barriers in the UK.

We provide flood protection solutions to the Environment Agency, local councils, housing associations, the construction industry, water utility companies as well as, the general public.

Floodgates are seen as a superior and cost effective replacement to ineffectual sandbagging and, as they do not require any fittings to the property, can be installed in most doorways with little or no remedial work required. All products are manufactured to BSI standards.

Primrose Avenue
Fordhouses
Wolverhampton
WV10 8AW

Tel 01902 789777
Fax 01902 398777
Email info@telling.co.uk

Telling Lime distribute the Unilit range of natural hydraulic lime mortars and plasters along with lime putty paints and lime washes.

Hydraulic lime mortars are suitable for application on to damp walls to stabilise the background when these have been exposed to high levels of moisture over time or as a result of flooding.

If existing mortar has been washed away creating cavities in the masonry lime grouts have ideal characteristics of vapour permeability and low compressive strength.

Unilit 30 hydraulic lime is suitable for cellars or to control salts carried by the moisture vapour as a wall dries out following saturation.

Mob 07841 83 03 93
Email jim@tiltdam.co.uk

TILT-DAM is a unique, permanently installed, demountable flood defence - a trench with counterbalanced tilting lid. From being a path or roadway, the lid is rotated by hand to the vertical, forming a defence wall with perimeter seals. TILT-DAM can be a single unit at an access point or a series forming an extended wall.

It is quick and easy to mobilise, nothing to "fetch and carry" and no motive power required. The design principles are reliability, safety, simplicity, robustness, rapid mobilisation and easy maintenance. An installation at an Environment Agency site near Birmingham demonstrates passive, active and flooded conditions.

Total Flood Solutions

totalfloodsolutions

Units 1 & 2
Pontarddulais Workshops
Pontarddulais
Swansea SA4 8SG

Tel 0845 4567175
Fax 01792 883171
Email info@totalfloodsolutions.com

Total Flood Solutions provide complete flood alleviation schemes for a variety of existing domestic, commercial and industrial premises as well as new build projects.

Solutions utilise our kite marked building skirt system, door dam systems, veneer walling and ancillary products to minimise flood consequences.

The company also provides a Survey and Flood Risk Assessment service to identify the problems, and design and implement effective practical solutions using our own staff.

Complete installations come with a guarantee of property flood insurance on competitive terms.

Waterwise UK Ltd

www.waterwiseuk.co.uk

Tel 01642 678000 / 605040

Waterwise UK is a specialist training organisation which operates within the fields of bank side and water based rescue.

We train groups such as the Fire & Rescue services, Police and security service personnel. Teachers, water authority workers, flood defence agencies, in fact anyone who works on or near water.

By bringing together many specialist trainers in the area of water rescue, we can offer the very best in superior instruction in areas such as Risk assessments, first aid, defensive swimming, rope and vehicle rescues.

WaterOut

www.wateroutuk.co.uk

Water Out UK
PO Box 139
Upminster
Essex
RM14 2YD

Tel 0500 51 00 52
Email actiondry@mac.com

WaterOut's unique rapid drying systems is revolutionising the way properties are dried out. Using conditioned outside air produced by the system, a property and its contents can be dried by clean, warm, dry air in a fraction of the time taken by traditional dehumidifier drying.

The system is cost effective and operated throughout the UK by our sole supplier, Action Dry – specialists in flood damage and construction drying. Please contact us for our booklet which compares traditional drying as used by the drying industry against WaterOut, both used in similarly damaged adjoining properties. The difference is staggering.
